

Ascom's Clinical 5

A single multi-use device in your pocket

1 Integrate with your mission critical systems

Do you need mission-critical information at your fingertips?

Empower your staff to communicate between different departments and share information seamlessly.

Our solutions connect all communication devices, from mission critical patient monitoring equipment to fire alarms.

Pagers, phones, smart apps, medical device alarms and 3rd party alarms - integrate them all to one device.

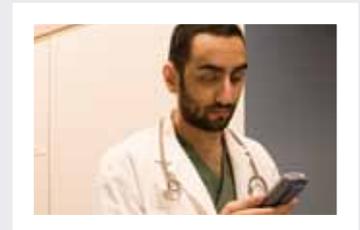

2 Focus on patient safety

Can your patients contact a clinician when needed?

Clinicians are battling against staff shortages whilst being asked to be more patient focused.

Our solutions allow them to maintain contact with their patients whilst on the move; ensuring alarms are received straight to their pockets.

Allow clinicians and other caregivers to respond effectively and efficiently with their patients.

3 Improve patient experience

Do you wish to improve your patients' experience in your hospital?

Log and track the interactions a patient has with their clinician, log response times and build a basis on which a patient's experience can be improved.

Our solutions allow you to keep track of every call, message and alert that is sent to a porter, clinician or other caregiver.

Logging and tracking of alerts, messages and calls for auditing.

4 Communicate effectively

Do you know where your staff are when you need them?

Doctors, nurses and administrative staff are constantly on the move and it is important that they are able to be reached when needed and have the ability to communicate with each other.

Our solutions allow you instant two-way communication with vital teams whilst on the move, wherever they may be in the building.

Get the right information to the right person at the right time.

5 Increase staff efficiency

Are your communications systems centred at the nurses' station?

Communications systems centred on the nurses' station are inefficient and time-consuming, keeping nurses away from patients.

Our solutions enable nurses to make and receive calls whenever they may be in the hospital.

Reduce a nurse's daily footprint from going back and forth.
