

## Ascom's Solution to the Corporate Responsibility Question

Risk management of staff loneworking or operating in a threatening or hazardous environment is now an agenda-leading item. Ascom has many years experience providing wireless based communication and alarm solutions specifically designed to meet these challenges.

As wireless personal alarm specialists, Ascom has a range of technologies based on WiFi, DECT, IP DECT and Paging platforms. These offer levels of functionality to suit every situation and can be tailor-designed to fit your specific operational requirements.

For individuals or groups of staff to have the means of raising an alarm with them at all times, without depending on fixed point buttons or telephony, is at the heart of the Ascom solution. This includes automatically generated real time alerts for conditions such as 'man-down' or 'no movement'.

Ascom also provides several different solutions for identifying the exact location of alarms that have been raised, and to comply with post event reporting, recording and storing responses as they happen.

However at their most sophisticated level, Ascom solutions can completely integrate with your legacy communication systems, allowing for example, direct dialling to handsets from a hard-wired PBX, messaging from existing alarm or building controls, even transfer of production data direct into the hands of relevant staff.
