

Lower the Cost of Upgrading Your Messaging & Communications Platform

Smart communication is one positive way of improving the Customer Experience and ensuring return business in these difficult times. At Hospitality 2009 held at the NEC Birmingham from 19th to 21st January, Ascom, who have many years experience in Hotel Comms, are rolling out their new IP-DECT Solution, which delivers more functionality for less cost of ownership.

Ascom IP-DECT combines the proven DECT standard with VoIP, allowing you to take advantage of both packet data and high-quality voice connections on the same network. You can look forward to superb quality of service and excellent messaging capabilities in a secure radio environment. And because there's seamless handover, you won't have to worry about interruptions and 'lost' information, which inevitably result in confusion, misunderstanding and irritation.

Our IP-DECT Solution delivers integration with your existing Back-Office, Building Management and Voice platforms and can even include Lone Worker Alarm options. It's a package that is simply not available anywhere else.

Installation couldn't be easier. There are just a few simple plug & play components, with no need for special software or any cabling. Configuration and Management of the system is straightforward using a web browser.

Find out more by visiting Stand 610 in the Hostec Marketplace at Hospitality 2009, or contact Mark Leppard, Business Development Manager.
