

[ONLINE CLASSROOM TRAINING]

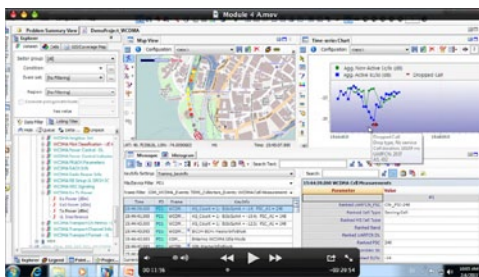

TEMS™ EDUCATIONAL SERVICES BRINGING THE CLASSROOM TO YOU

To become an expert in the use of a tool, you need the right competence at the right time.

A FLEXIBLE TRAINING PROGRAM IS THE ANSWER

Developing on-the-job expertise on a tool requires you to find the right balance between your important work projects and learning the tool's new features. You need the training to advance your skills, but attending a three-day course is not an option for you. Bringing the classroom to you on your computer gives you the flexibility to obtain high-level product training – wherever and whenever you want – and all you need is a working Internet connection.

BE ACTIVE WHILE BEING TRAINED

Traditional e-learning courses combine presentations and questionnaires to build your competence level, with varying levels of activity required on your part. E-learning is too often a passive experience. In contrast, Online Classroom Training invites you to actively listen to and watch a real instructor explaining the features and showing you how to use the tool – step by step. In addition, Online Classroom Training requires you to perform practical exercises using sample data provided to you as part of the course. Then final tests accurately verify your learning.

This is the same way of learning as you experience in a real classroom. It has the added benefit of your being able to stop the session or restart the whole session all over again. Try this with a live instructor during a training course!

LEARN FROM THE EXPERTS

The success of any training course is highly dependent on the skill and knowledge of the trainer, who not only demonstrates how to use each function, but also explains when it is best used. Online Classroom Training courses are developed by experts who know exactly the capabilities of the tools and their features. What's more, these experts not only create the course content, they are also in charge of recording the sessions. Online Classroom Training teaches you tips and tricks that you can immediately use in your daily work.

SUPPORT AT YOUR FINGERTIPS

Taking Online Classroom Training does not mean that you are on your own and cannot raise questions about your course. The Global Help Desk is accessible via e-mail at any time, and will forward your request to the course expert.

HOW DOES IT WORK?

Once you have purchased Online Classroom Training, you simply enter your personal login information into the Ascom Network Testing Learning Management System, and you will have access to your Online Classroom Training for three months.

What are the requirements?

To run Online Classroom Training you will need an Internet connection and be able to accommodate streaming video in your network.

Which online training course is available right now?

At present, Online Classroom Training is available for TEMS Discovery 2.1. More courses will be added in the near future.

WANT TO LEARN MORE?
